SUMMARY

Solutions, developer relations and creative technologist candidate. Santa Clara CS graduate (June 2026), looking for work now. Directs AI coding agents to build web projects and browser art, and makes the product and design calls.

PROJECTS

PorchLight, Third place, Cline, Parallel & Composio Hackathon, San Francisco — Oct 2026

- Directed three AI coding agents (Claude Code, Cline and Cursor) to build PorchLight in one afternoon. The agents wrote the code.
- Drop a pin on a neighborhood problem and it finds which San Francisco agency fixes it, with a link to the official source. It drafts the report but never sends it, and tells you to call 911 for emergencies.
- It uses the hackathon sponsors' tools: Parallel for web search, and Composio to draft the email and post to Google Sheets and Slack.

Engines and Gyre, Browser art, live at sykosyber.github.io/engines — 2026

- Made Engines with Claude: seven pieces of browser art drawn from math. One of them is Claude's self-portrait.
- Gyre, one of the pieces, draws moving 3D trails of light from math equations. Made with Claude; anyone can try it in a browser.

Attest, Entry, Kane CLI Hack Day, San Francisco — Oct 2026

- Attest checks whether what a project's docs promise actually works in the running app. Directed Codex and Claude, which wrote the code.
- Ran an extra AI code review that found three real bugs. Each was confirmed before the agents fixed it.

EXPERIENCE

SyberLabs, Co-founder, two-person software studio with Seth Carlson

- On RISE, a team project with Seth Carlson, owned the Composer feature, which lets ChatGPT write a reading that RISE plays. Made its product decisions and directed the AI agents that built it.
- RISE plays a book as timed text with matching visuals and sound. AI agents wrote most of its code.
- Tested Composer by hand in a live ChatGPT session and reported exactly what worked and what didn't, for example that the model couldn't see an on-screen marker.
- Chose RISE's home-page line: "Texts read to you, with light and sound made for them."
- Got written permission from the Icon Museum and Study Center to use its collection images in RISE.
- Made the SyberLabs network art and emblem with Midjourney.
- Set the goals for connecting Claude Code to GitHits, an outside startup's code search for AI agents. Agents built it; so far it has only been tested against a stand-in.

EDUCATION

Santa Clara University, B.S. Computer Science, Data Science emphasis, June 2026
Coursework included machine learning and AI.

SKILLS

Tools: AI coding agents (Claude Code, Cursor, Cline, Codex), Midjourney
