SUMMARY

AI automation and operations candidate. Santa Clara CS graduate (June 2026), looking for work now.
Directs four AI coding agents (Claude Code, Cursor, Cline, Codex) with clear tasks. Every change has to pass automated checks or be approved by a person.

PROJECTS

PorchLight, Third place, Cline, Parallel & Composio Hackathon, San Francisco Oct 2026

- Directed three AI coding agents (Claude Code, Cline and Cursor) to build PorchLight in one afternoon. The agents wrote the code.
- Drop a pin on a neighborhood problem and it finds which San Francisco agency fixes it, with a link to the official source. It drafts the report but never sends it.
- It runs the same fixed steps every time and only names an agency when a search result backs it up. It uses Parallel for search and Composio to draft the email and post to Google Sheets and Slack.

Attest, Entry, Kane CLI Hack Day, San Francisco Oct 2026

- Attest checks whether what a project's docs promise actually works in the running app.
- Directed Codex and Claude, which wrote the code, and made the calls on its direction during the event.
- Ran an extra AI code review that found three real bugs. Each was confirmed before the agents fixed it.

EXPERIENCE

SyberLabs, Co-founder, two-person software studio with Seth Carlson

- Works inside SyberWork, the studio's system for running AI agents, built by agents and Seth Carlson. An agent proposes a change, automated checks test it, and it's accepted only if they pass.
- Set the goals for connecting Claude Code to GitHits, an outside startup's code search. Agents built and tested it, so far only against a stand-in. Holds the pilot's accounts and budget and will run its live test (planned).
- On RISE, a team project with Seth Carlson, owned the Composer feature, which lets ChatGPT write a reading that RISE plays. Made its product decisions and directed the AI agents that built it.
- RISE plays a book as timed text with matching visuals and sound. AI agents wrote most of its code.
- Tested Composer by hand in a live ChatGPT session and reported exactly what worked and what didn't, for example that the model couldn't see an on-screen marker.

EDUCATION

Santa Clara University, B.S. Computer Science, Data Science emphasis, June 2026
Coursework included machine learning and AI.

SKILLS

Tools: AI coding agents (Claude Code, Cursor, Cline, Codex), GitHub pull requests, automated checks
